	The MAILING DATE of this communication appears on the cover sheet with the correspondence address Period for Reply						
A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION. - Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication. - If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely. - If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication. - Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Art Unit: 2834

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 22-26 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

These claims are vague and indefinite in that the average diameter (particle size) is related to "the smallest element dimension" but the claim does not contain any reference to any element. Thus one cannot determine the metes and bounds of these claims.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 1-12 are rejected under 35 U.S.C. 103(a) as being unpatentable over Baumoel.

Baumoel teaches a piezoelectric element coupled to an acoustic absorbing/attenuating material (figs. 1, 6, 11 and 13). The absorber is a combination of silicone and tungsten particles in an epoxy matrix. The particle size is related to the operating wavelength to give the most efficient damping (see e.g. col. 5 lines 4-33). Baumoel does not explicitly teach some specific dimensions and some of the specific materials claimed. However, it has long been held that selection from among known suitable materials, as well as optimizing a known structure for a specific application are

Art Unit: 2834

within the skill expected of the routineer. Thus any variations between applicants claimed device and the Baumoel disclosure would have been obvious to one of ordinary skill in the art.

Claims 13-27 are rejected under 35 U.S.C. 103(a) as being unpatentable over Davidsen (WO02/40184A2) in view of Baumoel.

Davidsen (figs. 1-6) teaches the structure of a multi element ultrasonic probe arranged in an array backed by a laminate of Baumoel in the Davidsen structures.
